GREEN PENDANT

Hana Slabá

GREEN PENDANT

In this simple step-by-step polymer clay tutorial by Hana Slabá, you will learn how to make this beautiful colorful pendant, using tools by LUCY CLAY.

Materials & Tools:

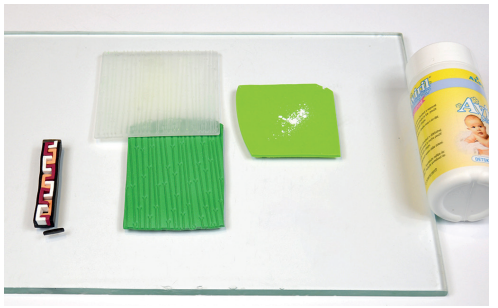
- Polymer Clay – black, white, 4 different colors
- LC Czextruder
- LC Disk 4
- LC Machine
- LC Shape plate 12
- LC Glassymer Glue
- Structural texture stamps
- Blade
- Baby powder
- Drill
- Jewelry cord

Hana Slabá

Hana Slabá lives in South Moravia and the joy of handwork has accompanied her since her school years. She discovered polymer clay in about 2014 and working with it brings her relaxation. She would like to keep creating and exploring the possibilities and various uses of the medium with lots of support from her family.

Visit her website: www.fimo-hany.webnode.cz

Condition the clay, extrude it through LC Disk 4 extension (“Bridge” – see the photo). The black extrusion shall be approximately 7cm/2.75" long, the colored ones should be shorter. Cut color extrusions approximately 4 mm wide and place inside the black one.



Condition green polymer clays, apply some baby powder and run through the pasta Machine together with a texture stamp. The texture will make an impression and will not glue to the stamp.

Cut two identical shapes using LC Shape Plate and bake together with the Czextruder pattern.

Condition some black clay and run it through the pasta machine on medium setting. Apply some Glassymer Glue on the black sheet, place the baked parts on the plate, cut them out. Gently squeeze, bake and neaten.

Finally, finish the back of the pendant, drill a hole for the jewelry cord and it is done.

LC SHAPE PLATES

LC Shape plates are thin stainless steel metal plates with patterns of different sizes, designed for clayers and polymer artists. Patterns were inspired by the most popular LC Cutters shapes.

LC Shape plates are heat-resistant and can be baked in an oven with polymer clay. They are also very durable, so you can cut out the shape you want and not being stressed about how not to damage the plate. With LC Shape plates you can work with very thin sheets of polymer clay and realize even very challenging polymer clay projects.

LC Shape plates will help you to create the piece you want with elegance and precision.
