

FLOWER CANE 1

Prepare flower extensions from LC Disk 6, polymer clay in black, white color, and one color.

I extruded blue clay through the flower disc and black and white clay through the other disc. Cut all extrusions into the same pieces (about 5 - 10 cm long).

Take the flower extrusion and place it between one black and one white extrusion. Repeat with all pieces.

Make a bigger cane.

Slice the cane and use it in your project. You can use LC Slicer or LC Mini Slicer for precise slices.

FLOWER CANE 2

Prepare half-flower disc and flower filing disc from LC Disk 6. You will also need a disc with small holes from the LC Disk 1. I also used polymer clay in black, white color, red, and yellow colors.

Extrude yellow clay through the disk with small holes, red clay through the half-flower disc, and black and white clay through the last disc. Cut all extrusions into smaller pieces.

Take the yellow extrusion and place it between two half-flowers extrusions. Make more flowers this way. I made some with a white fill and the rest with a black fill.

Press flower canes together to create a bigger pattern.

Slice the pattern using LC Slicer or LC Mini Slicer.

TRAPEZOIDAL CANE

For this pattern, you will need a crown disc from the LC Disk 6, one disc from the LC Disk 5 (rhombus or triangle shape), and clay in two contrast colors. I used yellow and black.

Extrude yellow clay through the crown disc and black clay through the rhombus disc. Cut it into smaller pieces.

Place two black (rhombus) extrusions between two yellow (crown) extrusions.

Make a similar pattern with reverse colors.

Now you can slice your canes.

PUZZLE PATTERN

For this pattern, you will need only one disc - puzzle from LC Disk 6. Prepare black polymer clay and one blend.

Run the blend through the machine at the thin setting and roll it up. Put it in the Czextruder and extrude it through the puzzle disc. Then extrude the black clay through the same disc.

Slice extrusions using LC Slicer or LC Mini Slicer.

Start assembling puzzles.

CIRCLE CANE 1

Prepare a disc with 3 holes from LC Disk 2 and a matching disc from the LC Disk 6.

1 extruded yellow clay through the disc with 3 holes disc and black and white clay through the other disc.

Cut extrusions into smaller pieces and place one yellow extrusion between one black and one white extrusion.

Now you can make a bigger cane.

Slice the cane and use it in your project.

CIRCLE CANE 2

For this pattern, you will need a quarter-circle disc from LC Disk 3 and a matching disc from LC Disk 6. I used clay in black and white colors.

Extrude both colors throughout both discs. Cut all extrusions into smaller pieces.

Assemble the cane.

Use it in your project. You can use LC Slicer or LC Mini Slicer to make even slices.

KLIMT CANE

Prepare a square disc from LC Disk 6.

Condition polymer clay. Prepare a sheet (about 1 - 2 mm thick) in yellow, white, and green color. Cut circles from each sheet using a cookie cutter - in the size of the Czextruder barrel. Stack circles on top of each other.

You can reduce the diameter of the stack slightly by rolling with your hand. Put it into the Czextruder and extrude the clay.

Cut the extrusion into small same-size pieces. Place them next to each other and press them together.

Slice your cane.

CZEXTRUDER FLOWERS

To make these flowers, you will need a drop shape disc from LC Disk 6.

Make a bulls-eye cane. I ran a purple blend through the machine at the thin setting and rolled it up. Then I wrapped it with a thin black sheet.

Place the bulls-eye cane into the Czextruder and extrude it.

Slice the extrusion. You can use LC Slicer or LC Mini Slicer and assemble the flower. Use a metal ball tool to make it rounded. Bake it on the ball tools according to the manufacturer's instructions.

Make a small ball from black clay, and cut it in half. Glue it in the middle of the flower (use liquid clay). Bake again.
